

A Preliminary Assessment of the Serpo case

Given that release of Serpo materials is still ongoing, the following is a preliminary look at what has been made public, so far.

The Serpo case may, in fact, be true (but could be false, of course). One or two of the DIA and intelligence sources involved in Serpo have been known to produce disinformation when ordered to do so by superiors, yet in this case they could, conceivably, be releasing old information in order to partly come clean with the public. Obviously, major US media wouldn't handle such topics because they are controlled and timid, at this point, more like courtiers than actual journalists when it comes to the biggest issues of our times. The denial and avoidance of major UFO and alien subjects by both the media and (parts of) the US government rank with the Roman Catholic Church's notorious denial of the proofs of Copernicus, Galileo and others. In other words, the ball is in the public court. The official and corporate structures are too corrupt to be honest in such cases. They seek profit, power and control. They prefer infantile citizenship to the honesty necessary for planetary survival, which is why we see photos showing massive chemtrails streaked across multi-state vistas while Bush and cronies deny that global warming is their responsibility.

However, some in the military and in black budget circles see that abducting alien interactions and secrecy have gotten out of hand and now threaten basic human sovereignty. Others see a need to leak information out slowly so that humans can become more competent regarding aliens. Nonetheless, they're moving too slowly and haven't made the progress they'd like to think they have. They're being played for naive by the abductors.

As for Serpo, let's look at the possible implications, assuming, for the sake of the argument, that the story is true (which we can't conclude, of course, at this date). If Anonymous and other former DIA and intel witnesses are correct, presidents Kennedy and Johnson knew about Serpo. So, the public would have been deceived, once again. Presidents know at least a skeletal outline about such subjects, even if some refuse to be soiled by the narcotics and mass murder, anti-constitutional drift of much of it and are then kept "out of the loop." It's a kind of omerta, it seems. Crimes within black budget structures are now so severe that the US is no longer a functioning, constitutional democracy. National elections are an electronic fiction, which is why people are so angry. Even Sandra Day O'Connor is hinting at the threat of dictatorship.

As for the reported Ebens, a population of 650,000 living in the Zeta Reticuli system some 38 light years from Earth probably wouldn't be cloning so many other planets' top species, as Serpo reports say Ebens do, unless they're working on a larger project. The Serpo reports say the Ebens are the group that crashed near Roswell, hence they are gray-affiliated and we may assume that they're part of what Phillip Krapf reports is called the IFSP, a federation of sorts. In short, being so small and minor an enclave, the Ebens would have little need to clone and copy the citizens of other worlds in our vicinity. Instead, the Ebens would appear to be tasked with the intelligence and infiltration work

of the IFSP. If the Ebens were an actual native population of the Milky Way, they would spend more time genetically engineering themselves for longer lives and greater durability, rather than doing the lab work of an abducting raider, of sorts. The Ebens are portrayed as being in so much of a rush to produce the IFSP catalogue of copied (then conceivably infiltrated) native populations that they literally took the body of one US soldier and cut it up, then used the body parts to clone human hybrids BEFORE even asking the other soldiers on the trip. *The given soldier reportedly died during transit.

From the report about the cloned hybrid: "I was shocked, as was 700 and 754 (two US soldiers, who used code numbers for the mission). This being, with our teammate's blood and cells, looked like a large Eben. But the hands and legs were similar to humans."

And what was the US soldiers' alleged response when they learned that their mate had been harvested? They were angry, scared. It was a major crisis for them. They pondered the use of weapons to underscore their aversion to the deed. Ebens were in too much of a rush, too industrial about it all. They didn't even bother to ask. Instead, they used the soldier's body parts to clone MORE human-Eben hybrids. Why, and for what uses? Eben secrecy about the matter would apparently have been intended to keep the soldiers from dwelling on the IFSP agenda re Earth (abduction, breeding, infiltration and control, plus IFSP takeover of nearby empty planets in other star systems, by the way). If, as the Ebens reportedly say, they've watched us for 2000 years, they would surely know that we have burial rites and that no human authority can legitimately authorize a breeding program (although there may be compromised black budget hacks who do so, either marginally working for the abductors, or hoping to learn about their technology).

In one report US soldiers reportedly say they saw other planets' beings in a lab where Ebens were cloning them. All the beings were awake and conscious, except for the aliens with a human-like body and a dog-like head. From the reports, "Two of the beings on the end looked like humans with dog heads. These beings were not awake. They were either sleeping or drugged." Ever read about the planet Iarga in Stefan Denaerde's report about a highly intelligent race living on a planet 10 light years from us (much closer than the Ebens), a planet that has abundant plant life? Iargans appear to have naturally evolved there--if the Iarga story is true (it certainly sounds plausible). Iargans have a head that some might think looks like that of a dog, but such an observation is only relative to our notion of ourselves. The Ebens allegedly kept the Iargan-like clones asleep. Why? Would it be because the Iargans would be Milky Way natives, NOT IFSP aliens? The Iargans might be seen as outsiders by the Ebens. Iargans reportedly live on a planet twice the size and gravity of Earth; hence they have strong, squat bodies and move in quick strides. Iargans may be our closest, native neighbors.

A small Eben population of 650,000 on a planet that's nearly the size of Earth would suggest that they are but a provisional enclave. The Serpo reports say that the Ebens' original planet was ruined, due to extreme volcanic activity (which closely approximates what happened to the gray planet, ironically). The Eben physiology is said to be similar to that of the grays, which suggests that Ebens (assumed to be actual for purposes of this assessment) would be a possible human-hybrid version of the grays, a minor enclave of

sorts. Are the Ebens merely reciting the story of the old gray planet when they reportedly talk of their old world? By the way, where was it?

Phillip Krapf reports that a more advanced population dominates the IFSP and is called the Verdants (500 trillion Verdants living on 246,000 planets). Verdants told Krapf they come from a galaxy located 14 million light years away in a separate galaxy group (four other galaxy groups are closer to us than the likely Verdant locale). Verdants also told Krapf that the grays originated in the Large Magellanic Cloud, a satellite galaxy near the Milky Way, which is visible from our southern hemisphere. The Large Magellanic Cloud currently moves away from the Milky Way at roughly the same speed at which Andromeda approaches. In other words, the grays aren't even natives of the Milky Way, but appear to be remnants of a previous IFSP intervention that resulted in the death of their planet. Krapf says a Verdant told him that IFSP has a long history of manipulated planet kills. They tend to seed neophyte upstarts with advanced technology (accidentally, in our case) yet fail to tell the denizens of a target planet that such technology must be used with countervailing measures. Negative energy technology (aka electrogravity, zero point, or scalar electromagnetic technology) must be used delicately at a low-intensity, ecological minimum—to prevent seismic instabilities and other complications. However, IFSP aliens don't tell that to humans, as far as I know. Other aliens do. The omission speaks volumes about the IFSP strategy for gaining conscripts.

Let's walk through some of the other items in the Serpo report. The Serpo report says that the grays actually now live in Alpha Centauri, the three-star system closest to Earth at a mere 4.3 light years distance. This is most ironic. The grays certainly didn't originate there, but would seem instead to have taken a position near us, for strategic IFSP acquisition purposes (if Serpo is valid). So, we've previously heard that grays dwell in Zeta Reticulum and/or Sirius and in other near systems. NOW, however, we get the Serpo report, which says otherwise. For grays to take up in Alpha Centauri would be an ill-advised provocation. Clearly, humans must be responsible for the local ecology, but a gray position there could easily inflame human greed to counter the grays. In other words, the IFSP would either want us to think that although grays aren't native to this galaxy they're in control of our environs, OR the IFSP would want to try to cordon off this vicinity and prevent our contact with native Milky Way aliens.

Personally, I don't want humans trying to make a claim to ANY other planets in our vicinity. We don't NEED them. We're currently screwing up this planet and should either live or die as a race here. Until we get it right here, we aren't even remotely qualified to barge in on other terra. We aren't competent to do so and all such terra should be reserved for long term NEED, not for the short-sighted indulgence of an unsustainable, elite economy. So, a gray presence in Alpha Centauri would be a mistake and would cause military industrial wonks to think that they need to stab out in search of future real estate, other options—just in case. Bad move, on both parts. Native Milky Way aliens will no doubt encourage us to be more patient.

The Serpo site says, "The Ebens had a great interplanetary battle with another race about 3,000 years ago. The Ebens lost many thousands in their battle. (many hundreds of

thousands of Ebens died in The Great War) The Ebens completely eliminated all of their enemies. The Ebens have never fought another war since. The Ebens have been space travelers for the past 2,000 years. The Ebens first visited Earth about 2,000 years ago.”

The last item could, conceivably, be a subtle attempt to hint at an IFSP-Eben role in Jesus’ life, yet another propaganda point of the Ebens. Unlike the grays of common note, Ebens are described as sexuals, although a fairly docile kind of sexual. But why the war? Did the Ebens actually have such a war, or would they lying about it? IFSP aliens have lied by first saying that they aren’t interventionist, they don’t use weapons, then saying (allegedly through Richard Boylan) that they are intent on MASSIVE intervention here, at present. Verdants also tried to fool Krapf into thinking that they’d never harm a single living bacteria, i.e. on an incoming asteroid, yet a Verdant female told Krapf they would obliterate the asteroid. Krapf called her on the inconsistency and she was extremely flustered at having said too much.

If extant, Ebens would definitively be an IFSP population, conceivably just a hybrid enclave for use in trying to steer us into the IFSP and take some 7-10 other nearby empty planets, in the process. The Eben claim to have killed another planet during a war using “particle beams” could be a lie intended to make the Ebens seem formidable. The only planet they might have killed would have been their own. It’s nearly impossible to kill an entire planet using particle beams. Particle beams produce local burns and so on but don’t destroy an entire planet’s ecology. It would take weapons use of negative energy technology, which the Ebens would certainly have. Misuse of such technology likely killed their purported original planet (it does so through accentuated waveform, as Bearden writes, not particulate streams from a gun). By saying the war Ebens fought used particle beams, as such, the Ebens would be lying, and hence the claim about the war may be a lie also.

The Serpo reports describe the following incident while US soldiers were on Serpo, “Ebe 2 came into our living compound, just after one of our rest periods. Ebe 2 was excited and told us to stay inside and not to exit our living quarters. We asked why and Ebe 2 said that an unknown spacecraft had entered their planet's orbit. But Ebe 2 assured us that the military will take care of the problem. We naturally went into our own alert. We issued our weapons and stood by to guard our living area. We violated her instructions and went outside. We watched the skies and saw a lot of air traffic. We then saw all the military members with weapons and something that looked like field packs. They were in full fighting gear, as 899 called it. The alert didn't last very long and Ebe 2 came back, looked at us a little curious and then told us everything was alright and the alert was over. We asked her if the unknown spacecraft was identified. She said it wasn't a spacecraft but just a natural piece of space debris and left it at that.”

Why the contrived alert? When a piece of space debris comes near a planet, WE don’t freak. Ebens certainly could have tracked its slow motion, its un-electrogravitic mode of travel, and would have charted the object earlier, it seems. I suspect that the Ebens would have wanted to instill a little bit of drill sympathy in the US soldiers, to make them feel as though the Ebens are the good guys. Meanwhile, actual drills of the sort would probably

be intended to ward off our own, conceivably less offensive, non-interventionist neighbors who could be expected to buzz the Ebens angrily because Ebens would be doing the abduction and cloning dirty work of a non-native colonial (the Verdant-dominated IFSP). Ironically, the good guys in our neighborhood could be the patrols buzzing Serpo! The Iargans would possibly be among such patrols buzzing Serpo.

Iargans are described as gentle and intelligent, and resourceful. They reportedly live as a commonality that evolved quickly and moved beyond the infantile kind of classist, planet-poisoning elitism that we now suffer (amid an escalating, highly manipulative Intervention).

In the end, the Serpo war could be the Ebens' fake, manipulative propaganda. Alternatively, they could be merely referring to their own planet-killing apocalypse. But wait a minute: how could they have fought a war just 3000 years ago? Wouldn't that place it during the times of their visit in our vicinity, their residence on Serpo? In other words, if their war actually occurred (which seems doubtful), it might have been against one of our neighbors! The 2000 year travels story and the 3000 year war story are too convenient, too closely tailored to our circumstance.

In the end, I don't trust the Eben's stated war story, although they may have told US soldiers about it. It would appear to be convenient propaganda, a way to put the fear into humans about bad, crazy aliens (our neighbors—who AREN'T massively abducting and breeding human hybrids for IFSP use here on this planet, by the way).

From the Serpo reports: "The Ebens did warn us that several other alien races within our galaxy were hostile. The Ebens stay away from those races. The debriefing document never stated the name of the enemy, probably because they no longer existed." Again, who are those other races? For all we know, the Ebens and the IFSP would try to say the enemies are our surrounding neighbors. The purported Ebens would seem to be trying to isolate us from neighboring native aliens. Another bad move.

It's ironic that JFK was assassinated just before the Ebens allegedly arrived in April 1964 for a planned shuttling of soldiers to their planet. The Serpo report says Kennedy approved of the exchange, but that Johnson doubted that the Ebens would actually arrive. In the Eben mind, which president would have been seen as more pliable: JFK, who was assassinated to remove a legal-minded obstacle to the mob regime here, or Johnson, who bowed to JFK's killers (if not aware of them, a priori) and rushed the US into Vietnam under fraudulent circumstances?

The Ebens allegedly have but one higher educational institution on "their" planet (which they cannot own, being natives of some other distant system). What kind of planning is that? A more mature, stable planet would have several universities, at a minimum. Instead, the Ebens would appear to be tightly indoctrinated—all at one place, under the thumb of a larger power (assuming they are as reported, again, for the sake of the argument). US soldiers allegedly say they saw high towers in their settlements [probably Tesla or negative energy systems (wireless, as are their devices) that use the planet's

metallic core as a capacitor, a la Bearden]. Their disks, their norms and their technology would all bespeak IFSP norms, as do their affiliations. One account places grays among their welcomed visitors.

The Ebens would also be anomalous in that “they worship a Supreme Being.... They conducted daily services.” Other aliens don’t appear to worship, as such, even though they may think that all-of-universal mind is transcendent. Other aliens have an ultimate regard for greater community of mind, of the sort. In this aspect, the Ebens would appear to be tailored, miniature style, to appeal to bronze age human ideas and mythology. Again, this would suggest an IFSP enclave, not a mature, independently evolved population.

Michael Salla doubts the Serpo story’s validity because of possible DIA disinfo. and previous disinfo. in the Paul Bennewicz case (he has a good point), and because the Ebens talked orally to the soldiers during their mission to Eben. However, given that the soldiers reportedly were taken to Serpo just 17 years after Roswell, the IFSP aliens might have wanted to limit the information given to humans. If it was the Ebens who crashed at Roswell, they already had one strike against them within the IFSP hierarchy, hence Ebens might have been motivated to use oral communication around the US soldiers because alien telepathic norms, if observed and copied by US soldiers, would have allowed them to discern too many unspoken details about the Ebens. Telepathy would have shown US soldiers that there’s an underlying universality of mind, geometry and concepts that would have made communication much easier for the soldiers. Had they seen Eben telepathy as the norm, they could have investigated the Ebens more effectively, hence the oral alternative. We can fairly assume that Ebens would have used telepathy among themselves, but when some strange, hair-headed US soldier was around, the protocol could have been changed for security reasons.

Ironically, one Serpo report says President Clinton wanted to continue the Serpo exchanges but was “overruled by others in his administration” and the program was terminated in 1994 with Ebe #5. Who overrules the president? No one, except for black budget malcontents who’ve already voided the US Constitution in their own minds. The IFSP’s infiltration of this planet is now so deep and “internal,” as Michael Salla suggests, that we should consider the possibility that the Ebens and the IFSP wouldn’t have wanted to work with Clinton because, like other Democrats and constitutionally-minded Republicans, he might have leaked details about black budget crimes. He might have told the rest of us about the dangers that are mounting against this planet. (Clinton’s coziness with Bush Sr. in recent years suggests that Clinton really IS the Mena AR cocaine crony that Daniel Hopsicker’s book *Barry and the Boys* outlines---Clinton is deeply compromised). Meanwhile, the IFSP prefers secrecy in order to deepen their doings here out of public sight, not quick disclosure. In that regard they are most duplicitous.

From the report: “The one forbidden act is not to enter a private living house. We did that once and were politely escorted out by the military. There seems to be more military than actually needed. They do have weapons, as I mentioned before. We rarely see any military member with those weapons. But we have seen them during the alert that

occurred some time ago.”

Most ironic, isn't it? Ebens harvest humans for the body parts and intervene on our planet as they choose, yet they don't want a human to set foot in a private house on Serpo... Why not? Would it have been because US soldiers might have seen monitors with IFSP system-wide news inside, evidence of what IFSP aliens are actually doing, both here and elsewhere? IFSP aliens reportedly monitor us in every way that they possibly can, yet Ebens don't want US soldiers to know about or become too familiar with any Ebens' internal home activities, in this scenario.

In sum, it seems that the Ebens wouldn't necessarily be a violent, aggressive people, in themselves, yet they would represent a larger structure that is highly questionable and a potential threat to human freedoms and resources. Our safest long-term strategy would be to not harm any such aliens. Instead, we should investigate them and the Serpo story and disclose what is known, to the public. Rather than warp our social structure precipitously to counter a distant alien incursion, a distortion of human relations that cannot be undone easily, we should simply educate ourselves about aliens. A wider understanding will lead to a better human ecology, in short order.

This assessment isn't written to discourage further publication of Serpo materials. The more we know, the better. The reported photos would be particularly helpful but should be released without placing the matter in the lap of begrudging apparatchiks. They can always say, So what: that's just sci fi stuff... Meanwhile, we'd get the picture and would proceed as we always do: in advance of the mainstream awareness. (I doubt that any such photos will be released, of course). In the end, given the convoluted past history of Doty, Bill Moore and so on, we can't yet conclude that Serpo is as stated. If the story is false, intel has committed a grievous error. The subjects discussed in the Serpo releases are of such great importance to our nascent understanding of exopolitics, that a fraud would be unforgivable. It would impeach the credibility of all such intel sources for decades and would play fast and loose with subjects of critical importance to all who live on this planet.

We need more information about the case so that we can correlate what we know and develop a more competent analysis. We need a wider public awareness in order to further develop global conventions and safeguards against abuse of the new technologies, and against unwanted alien predations. By knowing more about our neighbors, we'll be able to see where we're actually going, in a sense. We'll be both safer and wiser for having done so.

--G.L., writer and researcher in Davis, CA (author of Alien Mind – a Primer)
